Subject: REMIT_Public Consultation Paper PC_2015_R_03_PGNiG remark

Dear Sirs,

We would like to report a one remark to the Common Schema for the Disclosure of Inside Information. It concerns the question 3. (Box 1) *Would you change any of the descriptions, accepted values or applicability? If so, please explain your reasoning. Are the schemas or values that you are suggesting based on any industry standard? Which one(s)?*

Our answer is:

Yes.
*'Unavailable Capacity' (line 10) and Available Capacity (line 11) which allows readers of the UMMs to derive the possible impact of the event on wholesale energy prices **should be expressed in MW instead of proposed MWh/d.***
Reason: Due to the difficulty of estimating the duration of the event and variability of capacity better express the affected capacity in MW rather than in MWh/d.

Best regards,
