PUBLIC CONSULTATION OF 9 APRIL 2019 (PC-2019-G-03) ON SINGLE BOOKING PLATFORM

Energinet hereby puts forwards its general comments concerning the evaluation methodology.

When investing large sums in new gas infrastructure it is important to reduce risks. Energinet therefore wants to highlight the following three issues as being important in choosing an IT platform to market its capacity products:

1. **The quality of the platform is very important.** The savings on the IT platform will be small compared with risk taken with a lower quality platform. We would change the price-quality ratio to 20/80.
2. **Governance structure.** The platform must be independent from single TSOs and have clear governance structure for involving all relevant TSO users in developments of the platform and structured processes for involving and consulting stakeholders/Shippers in development and operation (i.e. user surveys) of the platform.
3. **Robust IT systems** with documented high IT safety standards.

Energinet's specific comments have been included by the work submitted by PRISMA.

Yours sincerely,
