

Public consultation on the Capacity Allocation Mechanisms Network Code: achievements and the way forward

Fields marked with * are mandatory.

A Introduction

With gas markets being impacted by a global pandemic (2020) and a European energy crisis (2022), the resilience of the current market rules (also known as “network codes”) has been tested. Although they have ensured a proper market functioning (see ACER’s Market Monitoring Reports and Congestions Reports), lessons have yet to be learnt to further enhance market resilience.

The European gas market must also be ready to align with the latest policy and technological developments, guaranteeing the Green Deal’s decarbonisation targets can be met.

Against this background, the latest European Gas Regulatory Forum has emphasised the importance of having gas market rules which can adequately reflect this evolution, and therefore prompted for the revision of the capacity allocation mechanisms network code (CAM NC).

As part of ACER’s review of the Network Code for Capacity Allocation Mechanisms (‘CAM NC’), ACER is assessing the achievements of CAM NC and scoping the areas of improvement.

ACER invites stakeholders to actively participate in its review by providing feedback on the scoping of the areas of improvement as well as making reasoned proposals on further areas of improvements that could be considered for eventually amending the CAM NC.

The ACER CAM NC scoping document (‘scoping document’) contains ACER’s review of the market rules regulating gas transmission capacity allocation in Europe and proposes a scoping of areas of improvements based on ACER’s work on CAM. It serves as the **main consultation document** to which the questions in this survey refer.

Please send your response to the questions **by 5 January 2024, 12:00 noon (CET)**.

We invite stakeholders to bring forward concrete and succinct reasonings. Overly lengthy responses may not be processed.
The survey was corrected on 17 November for missing questions.

The stakeholder responses will be published on the Agency’s website. If you include commercially sensitive information in your reply, please mark the parts of your answer that are confidential as well as provide a non-confidential version for publication purposes.

Please confirm that you have read the [Data Protection Notice](#)

C Consultation documents

Download ACER's [Scoping document](#)

Download the [cover note to the scoping document](#)

The following questions are organised per chapter and article of the CAM NC, first depicting ACER's review included in the scoping document, a question on how you assess the need for a change in the article, and a question inviting you to elaborate your answer with specific elements.

D CAM NC Preamble

CAM NC Preamble - point (x) (new)

Policy paper reference	Nature of proposal in the policy paper	Area of improvement
<i>ACER Special Report on addressing congestion in North-West European gas markets</i>	<ul style="list-style-type: none">To maximise technical capacity as well as (bundled) firm capacity (cf. p.15-17)A further strengthening of coordination between neighbouring system operators and regulatory authorities is needed, for instance, by harmonising calculation methodologies (cf. p. 16)	yes
N/A	<p>Clear recital or New article on CAM principles</p> <ul style="list-style-type: none">The core principles of capacity allocation mechanism must be explicitly defined in the NC. Allocation capacity mechanisms must guarantee the well-functioning of the internal market (GTM, guarantee the gas flows, not bottlenecks, bundled offer, cascading principle, market-based allocation, etc.).	yes

8 Do you agree with ACER's review of the CAM NC Preamble and the identified area(s) of improvement (yes=amendment identified, maybe= amendment may improve market, no=no change envisioned)?

An amendment may further improve the market functioning and better capacity allocation

- Strongly agree
- Agree
- Neutral
- Disagree
- Strongly disagree

* 9 Please elaborate on why do you agree or disagree with ACER's review, being specific about which elements you agree or disagree with? Are there further improvements that you consider relevant in this area in addition to the ones raised by ACER in the scoping document; please explain your reasoning?

GRTgaz is strongly against making any changes to topics 1 & 2, finding such changes counterproductive.

1) Maximization of technical and firm bundled capacity

The firm and interruptible capacities GRTgaz gives to the market are already maximized. And the level of firm bundled capacities is maximized with our neighboring TSOs. About interruptible capacities, see our answers below.

2) Strengthening coordination

GRTgaz does not agree with this statement of weakened coordination. For example, French and German TSOs coordinated very well to offer maximized firm daily capacity from France to Germany as of October 2022.

Concerning the example of a strengthened coordination via a harmonization of the calculation methodology, each network is different. By harmonizing capacity calculation methodology one may lose flexibility and optimization of all the systems with the same methodology will most probably lead to less efficient offer of the capacity – not taking into consideration individual specificities. It would be a very complex and costly measure for an uncertain gain. Therefore, GRTgaz strongly disagrees with the idea of harmonizing them.

E CAM NC, Chapter I, General provisions (Articles 1-3)

* 15 Please elaborate on why do you agree or disagree with ACER's review, being specific about which elements you agree or disagree with? Are there further improvements that you consider relevant in this area in addition to the ones raised by ACER in the scoping document; please explain your reasoning?

GRTgaz "completely disagrees" with point 1. We do not understand or see any benefit to the market by introducing the concept of technical capacity. For us the « technical capacity” means the maximum capacity that can be offered to the network users, taking account of system integrity and the operational requirements of the transmission. Its definition should remain large.

Moreover, the proposed definition is not compatible with what is commercialized on the French network (GRTgaz and Teréga networks): we sell the maximum capacity that can flow at a contractual point (on a firm basis), but these capacities on all our interconnection points cannot be fulfilled in all flow scenarios: the “core network” is not dimensioned for that. When when we meet physical bottlenecks, we apply the mechanisms (including locational spread) decided by our regulator CRE to solve the physical congestion. So that our system is physically and economically optimised.

* 21 Please elaborate on why do you agree or disagree with ACER's review, being specific about which elements you agree or disagree with? Are there further improvements that you consider relevant in this area in addition to the ones raised by ACER in the scoping document; please explain your reasoning?

The scope of this question covers several topics:

1) Concept of technical capacity please see answer to question 15

2) Harmonization in offering of interruptible capacities considering “technical capacity”

GRTgaz believes that mandatory bundling of interruptible capacity could be counterproductive and cause more distortions in market functioning than benefits.

As it is in the interest of TSOs (and the market) to sell as much capacity as possible, the capacity to be offered is already calculated in the most optimal way in order to maximise the supply of (bundled) firm capacity. But interruptible capacity, contrary to firm capacity, can be interrupted; and most often the interruption conditions are not the same on each side of the border. It would be very complex to bundle them and to give visibility to the market.

Furthermore, the market is mainly interested by firm capacity and not interruptible. Thus it is useless wasting a lot of energy on this subject.

3) Integrate conditional capacity products – GRTgaz does not see this need.

4) “Dynamic recalculation” process or methodology - See our answer to question 9. More over, GRTgaz already makes a kind of “inverse” dynamic calculation: we sell more capacity than our network can transmit. And if there are congestions, we buy dynamic modifications of the nominations through locational spread. Each TSO should have its own method to optimize its capacities.

Article 7 – Exchange of information between adjacent transmission system operators

CAM NC

G CAM NC, Chapter III

Allocation of firm capacity products (Articles 8-18)

Policy paper reference	Nature of proposal in the policy paper	Area of improvement
<u>FUNC 01/2020 "Greater flexibility to book firm capacity at IPs" - Issue Solution and Issue Solutions Supporting Note</u>	<p>Possibly revisit the set-aside rules of points (6) and (7)</p> <ul style="list-style-type: none"> • "ACER and ENTSOG did consider whether there would be a need to revise also the set-aside rules, in order to avoid capacity for the shorter-term products from being sold-out. No concrete proposal has been put forward as the current wording of the Article already allows for greater shares to be set aside. It can however be considered for the official amendment process whether higher volumes of capacity should be set aside, and/or if a dedicated set-aside rule should be applied to each short-term product" <p>(Annex 1 – Issue Solution Supporting Note Evaluation of FUNC Issue 01/2020 "Greater flexibility to book firm capacity at IPs" 2023, p. 16)</p>	maybe

19

Policy paper reference	Nature of proposal in the policy paper	Area of improvement
<u>FUNC 04/2019 "Auction restrictions NCG"</u>	<p>Relevance to be re-assessed</p> <p>"Given the auction-based capacity allocation according to CAM NC at IPs and the deviating capacity allocation process at DEPs based on national law, capacity cannot be allocated in a straightforward manner as competing capacities. Based on that, a reallocation of capacities from IP to DEP might be appropriate as an interim measure for such exceptional cases, if TSOs are guided by a number of predefined criteria:</p> <ul style="list-style-type: none"> • This procedure does not endanger security of supply both for customers supplied via the IP or the DEP • There is appropriate reasoning that there is indeed potential for competing demand for capacity at both IP and DEP and, in the absence of appropriate network expansion, the level of demand at the DEP cannot be met without allocating capacity from the IP to the DEP • Capacity may be reallocated to the DEP and will be re-allocated again to the IP if it is no longer needed at the DEP • The relevant network operator offering the capacity seeks cost-efficient measures to meet the overall capacity demand and render the re-allocation redundant. • A reallocation of available capacity is the efficient result of an alignment between the involved network operators of the market areas impacted by the reallocation. • The highest level of transparency is ensured, which involve a yearly alignment meeting between relevant parties, in particular the national regulatory authorities (NRAs) and network operators of the market areas impacted by the reallocation. Furthermore, shippers are informed of possible reallocation of unbooked capacity prior to the relevant auctions on the capacity booking platforms. • TSOs and NRAs will make their best efforts to assure that this interim measure lasts the shortest period of time possible." (Auction Restrictions in the NCG Market Area Issue Solution Note 2020, p. 1-2) 	maybe

20

- * 24 Do you agree with ACER's review of this CAM NC article and the identified area(s) of improvement (yes=amendment identified, maybe= amendment may improve market, no=no change envisioned)?

An amendment may further improve the market functioning and better capacity allocation

- Strongly agree
- Agree
- Neutral
- Disagree
- Strongly disagree

* 25 Please elaborate on why do you agree or disagree with ACER's review, being specific about which elements you agree or disagree with? Are there further improvements that you consider relevant in this area in addition to the ones raised by ACER in the scoping document; please explain your reasoning?

Revision of set-aside rules: GRTgaz does not see the need to revise the set-aside rules.

Are there further improvements that you consider relevant in this area in addition to the ones raised by ACER in the scoping document; please explain your reasoning?

GRTgaz strongly supports the solutions / amendments to the FUNC issue ID 1/2020 proposed by ENTSOG. The main proposal is to introduce additional booking opportunities via additional UPAs auctions.

The more there will be auctions, the more chances the capacities will have to be sold because of favorable spreads. This will generate increased revenues for TSOs, which means that the transmission tariff we be more competitive for shippers and gas consumers. So that it will benefit to the whole gas market.

GRTgaz gives priority to increasing the number of quarterly and monthly products (and to a lesser extent yearly), which has the best cost/benefit ratio: there will be more opportunities to sell these products, for a reasonable IT cost. The CAM NC Amendment should at least propose this change.

However, the creation of a new product (Balance of Month) or advance booking for daily capacities seems an important change, could bring complexity and generate important IT costs. GRTgaz does not support these proposals.

Article 12 – Annual quarterly capacity auctions

Policy paper reference	Nature of proposal in the policy paper	Area of improvement

Are there further improvements that you consider relevant in this area in addition to the ones raised by ACER in the scoping document; please explain your reasoning?

GRTgaz does not see any benefit from the incremental process:

- we haven't had any relevant demands so far; and it took time to implement it each time;
- the process is complex and long (at least 2 years), not relevant to increase quickly the capacity if needed;
- if the TSOs identify a need from the market to develop new capacities, they can also do it by a lighter process at their own initiative;
- the current context is not develop a lot of new cross border capacities, but rather to decrease them. Due to the context of climate change, decrease in gas consumption and development of biomethane.

GRTgaz prefers to simplify the system and concentrate on the priorities.
