Mute your microphone and keep it muted when not speaking

Raise hand or write in the chat to request the floor and wait until given the floor

- Unmute yourself and turn on your camera
- Identify the organisation you are representing

ACER will publish all materials supporting the workshops

We may publish summary notes of the workshops
How to integrate Stakeholder views?

**Expectations**
- What are the expectations on all sides?
- Applicable both to the Guidelines and scenario development

**Capacity**
- What is the SH capacity for contributions?
- Applies more to the individual Scenario development

**Agreement**
- Develop a shared vision for working together
- Applies more to Scenario Guidelines

**Performance**
- Monitor our performance
- Applies more to the individual Scenario development

**Evaluation**
- Evaluate and modify, where appropriate
- Applies more to the individual Scenario development
The framework (Scenario) Guidelines aim to facilitate a scenario development process (within the Ten Year Network Development Plan) that ensures transparency, is non-discriminatory and delivers robust scenarios.

Scenarios should be in line with:
• the energy efficiency first principle and
• the Union’s 2030 targets for energy and climate and
• 2050 climate neutrality objective

Scenarios shall also take into account:
• the latest available Commission scenarios, as well as, when relevant, the national energy and climate plans.

Scenario development should fit comfortably in the 2-year Ten Year Network Development Plan cycle.
2. Stakeholders’ ideas to ensure an inclusive stakeholder process

Presentations and discussion
Ensuring an **inclusive stakeholder engagement** process raises many questions

- How should the stakeholder engagement process look like in comparison to the current process?
- What is the appropriate length of a scenario development process that allows an inclusive stakeholder engagement process (bearing in mind the scenario development should comfortably fit within the 2-yearly TYNDP cycle)?
- What are the critical input moments for stakeholders to provide input?
- How to ensure the relevant stakeholders are ready to contribute with sufficient expertise?
- How to ensure stakeholder inputs do not lead to a biased scenario development?
[placeholder for stakeholder presentations]

- Renewables Grid Initiative
- CAN Europe
- E.DSO
- Eurelectric
Description of current process
How can stakeholders help with debiasing information?
3. Closing session

3.1 Conclusions and action points
3.2 AOB
