

Stakeholder engagement in TYNDP Scenarios' Development

Andrzej Ceglarz
Programme Manager Socio-Energy Systems
Renewables Grid Initiative

2nd ACER's Scenario Guideline Workshop
26 July 2022

Suggested elements of timely and meaningful engagement

- Provide stakeholders with clear information about the timeline – so far only an indicative timeline was presented by ENTSOs
- Stakeholder engagement activities shall be announced two weeks in advance to give enough time to stakeholders to prepare
- Stakeholders should be informed what will be the exact scope of their engagement and what is expected from them to prepare
- ENTSOs should communicate about the engagement format, since it determines the engagement level

Suggested elements of timely and meaningful engagement

- ENTSOs should provide clear information about the governance process of Scenario development, indicating responsibilities and direct contact points
- Stakeholders should be involved in the storylines development process: from what was presented by ENTSOs, there was no stakeholder engagement foreseen for storylines development – only public consultation at the end of the process
- ENTSOs should ensure that all questions asked by stakeholders in the process of Scenarios development will be addressed
- ENTSOs should make the documentation of the Scenario development process (including the presentations) publicly available

Suggested elements of timely and meaningful engagement

- ENTSOs should ensure that all stakeholders are informed who from their peers participates in the TYNDP process and what kind of contribution they provide
- If needed, ENTSOs shall provide assistance and explanation to stakeholders unequipped with sufficient capacities to understand the modelling details
- ENTSOs should guarantee that ACER is involved in the Scenario development process, since ACER has the shared responsibility over the Scenarios. Moreover, ACER can provide continuity after stakeholder consultation and provide an equal representation of all voices
- ENTSOs should ask stakeholders for their feedback after each completed stage of engagement to potentially improve the follow-up activities

Thank you!
