

Contribution to ACER's scenario guidelines - workshop 2

26 July 2022

Jörg Mühlenhoff

How should the stakeholder engagement process look like in comparison to the current process?

- Allow for an independent peer review of the scenario building and modelling methodology
- Harvest the knowledge of the European energy and climate modelling expert communities, improve inclusiveness

What is the appropriate length of a scenario development process that allows an inclusive stakeholder engagement process?

- Mere length is less relevant, rather the timely inclusion of a broad range of scientific and other societal stakeholders

What are the critical input moments for stakeholders to provide input?

- The earlier, the better.

How to ensure the relevant stakeholders are ready to contribute with sufficient expertise?

- More and regular updates, publish clear timelines
- Consider different capacities: NGOs are not grid modellers

How to ensure stakeholder inputs do not lead to a biased scenario development?

- Be aware of too technocratic voices. Planning energy transition is more than society accepting optimised engineering.
- Independent assessment of key assumptions.
