

# Transparency in TYNDP Scenarios' Development

Andrzej Ceglarz

Renewables Grid Initiative

2nd ACER's Scenario Guideline Workshop

29 July 2022

# Topics of relevance concerning transparency

- Transparency is needed from the side of all participating actors, to guarantee their independence
- Importance to make data accessible and (re-)usable and to have a look into the data sources
  - to confirm that the data and assumptions applied guarantee the feasibility of the scenarios to be in line with climate objectives and targets and not leading to further lock-ins and external dependencies
- Interest in real time data showing origins of energy flows, increasingly capturing the flows from the distribution grid

# Thank you!
