**Subject:** Follow-up inputs after technical workshops for new framework guidelines on scenarios for network development planning

Dear [REDACTED],

Many thanks for organising the very helpful workshop series.

Following today's 4<sup>th</sup> scenario guideline workshop on aligning scenario with policy targets, I would like to collect the thoughts and reiterate in writing the following points that I made in previous workshops from a T&D Europe perspective:

To ensure the alignment of scenarios with policy targets as the focus of this workshop, and considering European Commission scenarios as part of the FF55 and REPowerEU and the updating of the NECPs, there could be the opportunity to include a dedicated chapter in the scenario development (n.b. in TYNDP, national development plans and NECPs themselves) to ensure there is a better forecast on what is needed in terms of future product and service volume to enable such scenario.

This point in volume forecasting was also reiterated strongly by a number of participants in the last poll shown today, and we believe that this is a crucial element to move forward with the energy transition and provide some answers to the other uncertainties for energy networks planning in the next 10 years.

We will look forward to the last workshop on Friday, and in the meantime we will continue to engage including with the public consultation following the technical workshops.

Don't hesitate if anything is unclear or if you have any follow-up questions.

Many thanks,
