 Agency for the Cooperation  
of Energy Regulators

**Second ACER workshop on  
Electricity transmission tariff  
harmonisation scoping**

**Project objectives and progress**

16 June 2015

**Vanja Munerati**

ACER Electricity Department

Potential rules regarding harmonized electricity transmission tariff structures a priority matter in EC Decision 2014/713:

- Scoping activity by the Agency to assess possible need for a framework guideline.
- Whether further tariff harmonisation is desirable at this stage and if so, what the appropriate approach may be.

ACER appointed CEPA consultants to inform its considerations, based on stakeholder survey, interviews and workshops:

- Analyse the extent to which current tariff structures enable or impede market integration, effective competition and effective functioning of the internal European electricity market.
- Identify and develop proportionate policy options to address any shortcomings with current tariff structures.

## **Stakeholder survey and interviews concluded.**

**First stakeholder event:** Whether differences in transmission tariff structures hinder the European internal electricity market and whether their harmonization potentially necessary/would be beneficial?

- Lessons to be learnt from the gas tariff harmonization process.
- Harmonisation to be initiated asap vs investigate after the target model has been fully implemented.
- Wider context (distribution, dynamic pricing) vs other factors (RES subsidies, capacity mechanism etc) that could potentially marginalize the importance of tariff harmonization.

**With today's stakeholder event, CEPA report will be close to finalisation.**

The purpose of today's workshop:

- Present CEPA draft findings and recommendations
- ETNSO-E views
- Stakeholder feedback and facilitated discussion
- Next steps

CEPA study findings and other considerations, including any further stakeholder input, will form the basis of ACER scoping paper.
