# First thoughts on project approach for monitoring implementation of network codes

Programme Office

**IG meeting**

18/10/2012

**Given the role of the network codes in achieving the internal market, timely and coordinated implementation needs to be ensured**

**Shared ownership**
- NCs are an important step to achieve an internal market, stakeholders have shared ownership towards implementation
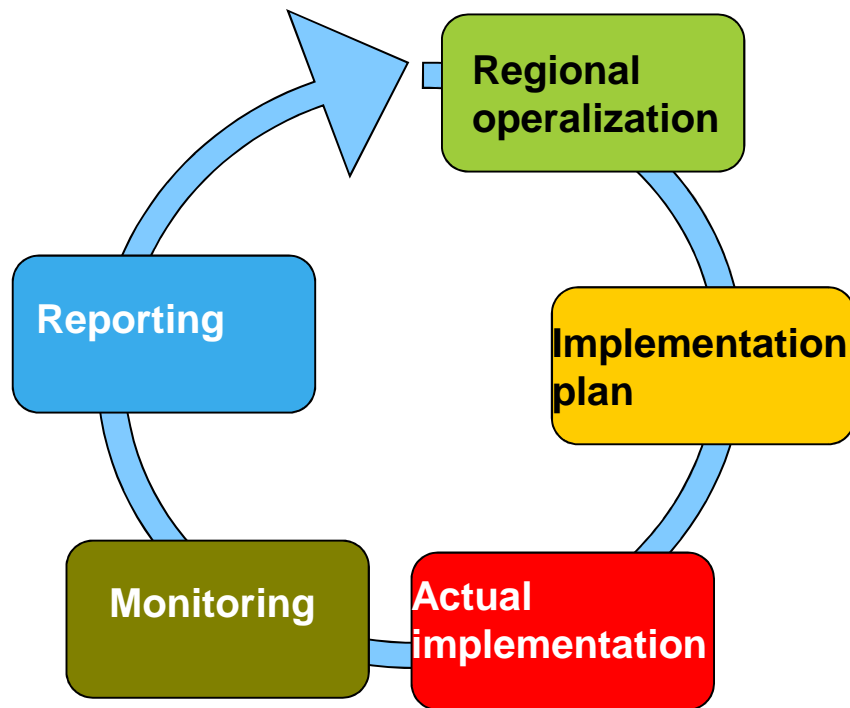

**Ensure effectiveness**
- NCs can only have effect if the rules are implemented in the same way at both sides of an interconnection point

**Fit for purpose**
- Certain NC might need regional interpretation to ensure that the codes are "fit for purpose"

## Programme Office has drafted an envisioned monitoring process

**Role of the region:**

**Regional operalization to make rules "fit for purpose"(where and if required)**

**Assist in timely monitoring and consistent implementation of the codes**

**Report progress/ obstacles to ACER/ European Commission/ Member States**

## First thoughts about the process, to be further discusses with the RCC and stakeholders during the upcoming IG meeting

### First ideas on steps to be taken

- Identify and share lessons learned from pilot projects to avoid "pitfalls" when implementing

- Identify (before of during implementation) a (regional) solution for a "pitfall" if necessary

- Drafting of checklist per network code to identify what needs to be implemented

- Drafting of a progress report to identify pitfalls (and solution) and timeliness of implementation

A small Task Force will be set up per network code …..

… to draft checklist and write progress report …

… national NRA and TSO(s) jointly provide input …

… Task Force will bundle all checklists and send report to ACER/ ENTSOG/ EC/ MSs

**IG meeting**

**Questions to participants in the IG meeting**

1. To what extent do you agree with the envisioned approach?

2. To what extent are you willing to participate (and possibly chair) the first Task Force?
