

# Session 3: Integrating gas and electricity markets for future-proofing the EU energy market design

How can regulators help deliver the new energy market design?

**Lord Mogg**

*ACER Board of Regulators Chair and CEER President*

# How can regulators help deliver the new energy market design?

## Flexible Regulation

Regulators must facilitate the entry of new suppliers into the retail market to ensure broader choice for consumers by removing entry barriers

## Securing Supplies

Greater transparency and regulatory involvement is needed to ensure that consumers, industry and politicians can trust that markets are functioning well.

## Making Markets Work

The real-time value of energy should be the basis of the price signals that all participants face.

## Smarter System Operation

We welcome a proportionate and focused approach to TSO cooperation and to the future cooperation between TSO and DSOs.

## Regulatory Oversight

Regulators need to ensure that the roles and responsibilities at national and EU level are clear and proper checks and balances are in place. Regional governance needs robust stress testing.

## Balancing Innovation and Regulation

Remove priority dispatch; to bring renewables into the market; and to ensure that all relevant market players are responsible for balancing.
